

# What is the difference between cross-cut and confetti cut shredders?

Last Modified on 12/04/2018 2:50 pm CST

Cross cut and confetti style shredders both cut the paper vertically and horizontally to shred sizes approximately  $5/32$ " x 2" pieces of paper (this cut size varies). There is no difference at all between a shredder marketed as a confetti style and a shredder marketed as a cross cut style

A strip cut shredder will cut in strips that are generally  $1/4$ " and the length of the shredded paper will be the same as the paper being shred.
