

What type/size of screws should be used when wall mounting the 99036 6 outlet surge protector?

Last Modified on 12/20/2018 2:21 pm CST

All Fellowes Surge Protectors that have screw slots on the back can use #8 self tapping screws. The most common are pan head or flat head depending on the opening on the Surge Protector.

Pan Head are good for the surges with smaller openings.

Flat head are better for the larger openings.
