

What is Microban®?

Last Modified on 02/01/2019 12:39 pm CST

"Microban technology is built-in antimicrobial protection that gives products an added level of protection against microbes such as stain and odor causing bacteria, mold and mildew. Microban protection helps products stay cleaner, fresher, and last longer than products with untreated surfaces." *www.microban.com*

Is it safe?

- Extensive independent lab testing has proven Microban protection to be safe. It is registered with the EPA for all applications in which it is used, including technology accessories.
- Microban protection has a long history of safe use and can be found in the leading brands of consumer, industrial and medical products around the world.
- Microban antimicrobial protection does not cause resistant strains of microorganisms. After more than 30 years of use in numerous consumer, industrial and medical applications around the world, there is no evidence of resistant strain development.
